# Coder (Staff Software Engineer, Agentic Engineering)

Staff Software Engineer, Agentic Engineering (Posting #6596)

**\*\*Candidate:\*\*** Mike Hall (Just3Ws) · Principal Software Engineer **\*\*Target Role:\*\*** Staff Software Engineer, Agentic Engineering (Posting #6596) **\*\*Company:\*\*** Coder (Remote, US) **\*\*Core Domain:\*\*** Agent Harness, Tool Use Execution, Context Budget Management, Distributed Workflows --- ## 🎯 Executive Summary & Mandate Alignment Coder's mandate: **\*\*evolving the agent harness, integrations, and long-running workflows that connect autonomous coding agents with real development environments\*\***: aligns directly with my hands-on track record building production-grade Model Context Protocol (MCP) servers, bounded subagent architectures, and deterministic simulation engines. I design systems where agent capabilities are **\*\*verifiable, context-budgeted, compliance-safe, and decoupled from model churn\*\***. --- ## 🏗️ Direct Architectural Match & Evidence ### 1. Agent Harness, MCP Tooling & Execution Lifecycles \* **\*\*System Built (Agent Tooling):\*\*** Architected and operate three production MCP servers (ctx-mcp, o2-mcp, llama-mcp) exposing live system state, telemetry, and local inference as callable tools to agent runtimes. \* **\*\*Context Budgeting:\*\*** Designed context-isolated subagent topologies that keep high-volume auditing out of primary conversational context windows, enforcing strict token economics and registration checks. \* **\*\*Provider-Agnostic Design:\*\*** Decoupled agent harnesses from single LLM vendors, allowing transparent fallbacks between local on-device models (llama.cpp) and frontier APIs. ### 2. High-Reliability Telemetry & Incident Escalation \* **\*\*Production Provenance (OneMain Financial):\*\*** Founded and led the enterprise OpenTelemetry initiative across high-traffic Acquisition lanes. Refactored multi-service state machines to eliminate silent lateral state mutations, cutting outage MTTR by 60%. \* **\*\*Observability-Driven AI:\*\*** Built o2-mcp to pipe live OpenObserve telemetry (spans, traces, failed jobs) directly to agents with automated PHI-scrubbing at the OTel ingest edge, enabling safe root-cause diagnosis without data exposure. ### 3. Deterministic State Machines & Complex Workflows \* **\*\*Production Provenance (Phalanx Duel):\*\*** Engineered a deterministic, server-authoritative simulation engine with zero-drift state replay across WebSockets, proving that AI workflows remain reliable only when state transitions are mathematically bounded. \* **\*\*Modernization Under Load (Coderwall):\*\*** Migrated high-volume MongoDB workloads to PostgreSQL under continuous production load, establishing strict relational integrity contracts. --- ## 💬 30-Second Interview Calibration > "I specialize in the operational reality of agentic systems. Writing syntax is cheap; the hard engineering bottleneck is keeping autonomous agents safely harnessed

to running environments through disciplined context budgets, deterministic tool contracts, and zero-leak telemetry. Coder is building the definitive operating platform for developer agents, and my background in MCP architecture and platform reliability is built specifically to scale that foundation." --- ##  Authoritative Verification Links \* \*\*Portfolio & Architecture Case Studies:\*\* [just3ws.com/portfolio] (https://www.just3ws.com/portfolio) \* \*\*Canonical Résumé:\*\* [just3ws.com/resume] (https://www.just3ws.com/resume) \* \*\*GitHub Profile:\*\* [github.com/just3ws](https://github.com/just3ws) \* \*\*Archive & System Proofs:\*\* [just3ws.com/interviews](https://www.just3ws.com/interviews)
