Wealth Management CRM

Staff Software Engineer: AI Agents, Platform & Rails Architecture

Target Role: Staff Software Engineer: AI Agents, Platform & Rails Architecture

Comp Range: \$150,000: \$240,000 / yr (Remote, Full-time)

Tone Calibration: Understated, fact-dense, zero-fluff. Written for VP of Engineering & Technical Leadership.

1. Mission & Architectural Alignment

The target mandate: **scaling an enterprise financial advisor CRM platform following a \$200M funding round, integrating AI agents and workflow automation into core Rails/Postgres architectures:** aligns directly with my experience in **financial enterprise acquisition architecture, local AI workflow orchestration, and high-concurrency Ruby/Postgres platform reliability.**

Why This Match Works (3 Grounded Signals):

- Financial Enterprise Domain & Compliance Scope:** Served as Senior Technical IC and Software Architecture Lead for the Acquisition lane at OneMain Financial, de-risking multi-step financial workflows, customer interaction surfaces, and third-party API supply chains.
- AI-Augmented Engineering & Agent Workflows:** Designed and implemented local, privacy-conscious AI agent workflows for codebase cartography, domain rule extraction, and deterministic evaluation: expanding engineering investigative capacity while keeping human verification explicit.
- Ruby on Rails, PostgreSQL & Cloud Platform Depth:** 25+ years operating production Rails, PostgreSQL (including pgvector), Sidekiq/Redis, AWS, Docker, and Kubernetes under live financial transaction loads.

2. Fit Matrix & Seniority Calibration

Dimension	Target Role Expectation	Mike’s Grounded Evidence	Fit Evaluation
Financial CRM Domain	Wealth management & financial advisor workflows, high data privacy.	5 years Acquisition lane architecture at OneMain Financial; regulated fintech compliance experience.	🟢 Direct Domain Match
AI Agents & LLM Integration	Modernizing CRM workflows with AI agents & automated tools.	Designed local AI cartography workflows & LLM orchestration with deterministic evaluation.	🟢 Core Technical Match
Core Stack	Ruby/Rails, PostgreSQL, React, AWS, Terraform, Docker.	25+ years Ruby/Rails, PostgreSQL (pgvector), Sidekiq, Redis, AWS/K8s, Linux.	🟢 Stack Parity
Scale & Growth	Scaling architecture following \$200M growth funding round.	Founded ACQ Enablement team; decoupled core loan acquisition monoliths into resilient microservices.	🟢 Growth / Scale Match

3. Proven Case Studies for Engineering Leadership

1. OneMain Financial Acquisition Lane Realignment & Telemetry (2021 to 2026):

- *Challenge:* Scaling high-volume financial customer acquisition flows with implicit lateral state mutations across multi-service Rails state machines.
- *Action:* Refactored Rails state transitions, mapped seven acquisition channels, engineered an automated 5-phase PII deletion engine across 30+ tables, founded ACQ Enablement, and deployed enterprise OpenTelemetry tracing across microservices.
- *Outcome:* Diagnosed and eliminated a persistent 4% silent traffic drop via DynamoDB session storage remediation, unblocked engineering streams, and built the Enterprise Trace.
- *Reference:* [case-studies/index.html#onemain-acquisition](#)

2. ActiveCampaign CRM Architecture Modernization & Query Optimization:

- *Challenge:* Tightly coupled PHP/MySQL backend and Ember.js frontend scaling rapidly through high customer growth with complex relational contact workflows.

- *Action:* Introduced structured query patterns, caching strategies, and hardened unit and end-to-end test suites across core CRM workflows.
- *Outcome:* Restored testability, reduced regression cycles, and accelerated developer velocity across contact and deal pipelines.
- *Reference:* history/index.html#activecampaign

4. 30-Second Interview Calibration (The “Answer, Frame, and Pause” Rule)

“I combine 20+ years of Ruby on Rails and PostgreSQL platform architecture with hands-on AI agent engineering and regulated fintech domain depth. At OneMain Financial, I led the Acquisition architecture: mapping seven ingress funnels, eliminating a 4% silent traffic drop via DynamoDB session remediation, and building an automated 5-phase PII deletion engine across 30+ tables. Scaling a wealth management CRM after a major growth round requires de-risking core Rails monoliths while safely integrating AI agent workflows, and that intersection is my primary focus.”

(Pause & Hook): “I can dive deeper into our local AI agent orchestration patterns, or we can look at how we decoupled multi-step Rails state machines. Which direction would you prefer to explore?”

Warm Peer / Referral

Subject: Principal Engineer note: Rails, distributed scale & platform res

Copy Text 

Hi [Name],

I saw Wealth Management CRM is scaling Staff Software Engineer: AI Agents, Platform & Rails Architecture and looking for a Principal Software Engineer.

I specialize in high-consequence Ruby on Rails platforms and legacy modernization. Over the past several years, I served as Acquisition Lane Architect at OneMain Financial, decoupling lending funnels, eliminating a 4% silent transaction drop, and driving enterprise OpenTelemetry adoption across Rails and middleware tiers.

I put together a focused 1-page technical brief mapping my background to your current engineering challenges:

👉 <https://www.just3ws.com/exports/briefs/financial-crm-staff-engineer-ai-agents/>

If this aligns with what you need on the team, I would be glad to compare notes. If timing is off, no need to reply.

Best,

Mike Hall
